Feline Surgery Electives

Patient/Client: _____ Chart #: _____

Below are lists of elective services that are recommended for the best care of your cat.
Please initial if you would or would not like these additional services done with your pet's surgery today.

Home Again Microchip:
This is a form of permanent identification using a tiny microchip. It contains a unique identification number that aids in recovery of a lost/found pet. The microchip is inserted prior to surgery using a hypodermic needle. Pinewoods Animal Hospital pays for your registration and first year of service.
Accept _____ Decline _____ Already has one! _____

Therapeutic Laser Treatment:
Therapeutic laser treatment is a non-invasive, drug free solution for animal pain and healing. It uses light to stimulate cells and increase blood circulation. At the correct laser wavelength, pain signals are reduced, and nerve sensitivity decreases by releasing endorphins or natural painkillers.
Accept _____ Decline _____

Heartworm, Flea and Tick Prevention:
Heartworm, Flea and Tick prevention is recommended for all cats. We offer a variety of products in hospital and through our online pharmacy. Please let us know if you need your cat's next dose.
- **Revolution Plus** – Once a month topical flea, tick, ear mite, roundworm, hookworm and heartworm prevention
- **Seresto** – Eight-month collar for flea and tick prevention

If your pet has fleas in the hospital at the time of surgery, we will require a flea treatment to be applied or administered. There is a charge for this medication.

Please send me with preventatives - YES   NO   Type/Amount: _____

We send all surgical patients home with an Elizabethan collar. If you already have one, please bring it to the surgical appointment so that we can make sure it is the right fit for your dog.

Soft Paws Application:
Soft paws are an excellent alternative to declawing. They are completely safe and humane and can be used on cats of all ages. Soft paws are vinyl nail caps that are glued on to your cat's existing nails. They are easy to apply, cats tolerate them extremely well and they are safe and non-toxic. They do not interfere with the normal extension and retraction of your cat's nails. Your cat can still scratch, allowing normal stretching and scratching behavior to continue-just no damage will occur! Once the nail caps are applied, they remain in place for ~ 4-6 weeks. They will fall off with the natural growth of your cat's nails. Addition cost applies.

Please apply soft paws _____ Do not apply soft paws _____
